The Inter-American Development Bank, through AcademiaBID, issues the following badge and certifies that the recipient has successfully completed the Cartography and Statistical Geography course, acquiring the following skills: Understanding the importance of Cartography and Statistical Geography in the production and dissemination of quality statistical data, as well as in the visualization and analysis of georeferenced statistical information.

Based on the knowledge and tools covered in the course, you will understand how mapmaking and the use of geographic information contribute to ensuring the quality and coverage of censuses and surveys, strengthening the processes of production, analysis, and representation of statistical information.

BID-INDES@iadb.org

Our people are committed and passionate about improving lives in Latin America and the Caribbean, and they get to do what they love in a diverse, collaborative and stimulating work environment. At the IDB, we're committed to improving lives. Since 1959, we've been a leading source of long-term financing for economic, social, and institutional development in Latin America and the Caribbean. We do more than lending though. We partner with our 48-member countries to provide Latin America and the Caribbean with cutting-edge research about relevant development issues, policy advice to inform their decisions, and technical assistance to improve on the planning and execution of projects. For this, we need people who not only have the right skills but also are passionate about improving lives.

Criteria

Learning objectives

- Understanding the importance of cartography and the processes involved in the production of cartography for statistical purposes and its use through geographic information systems.
- To learn about the latest technological tools used for the production of statistical cartographic information.
- To understand the generic processes to consider in the planning and design of statistical cartography generation projects.
- To learn about the technologies that will be applied in the future in the production and dissemination of statistical cartographic information.

Learning experience and activities

The course was developed in a self-paced format and consisted of 4 training modules that were developed through the autonomous learning methodology, which included the following:

- Text and multimedia presentations, videos, and reading documents that introduce key concepts to promote learning.
- Practical activities within the course to assess knowledge and understanding.
- Questionnaires at the end of each module.

Content

MODULE 1

- What is statistical cartography?
- Importance of statistical cartography
- Most common techniques and processes used in countries of the region
- Different techniques used by countries in the region in their cartographic updating processes
- Main difficulties in the process of updating and digitizing maps and lessons learned on the use of technologies in censuses
- Evolution of Statistical Cartography
- Statistical mapping for conducting surveys

MODULE 2

- Satellite imagery, remote sensors, and building fingerprints.

- Geographic Information Systems in the construction of statistical cartography and in the dissemination of results.
- How does GPS technology work? And how can it be applied to statistical mapping?
- Examples of freely accessible geographic and statistical information.
- How is geographic information organized in geographic databases in Geographic Information Systems?
- Hardware and software in Statistical Cartography.
- Most common types of maps used to publish statistical information.

MODULE 3

- Methodology, identification of needs and determination of variables.
- Operational organization and process flow.
- Resource estimation.

MODULE 4

- Cloud-based GIS applications.
- Spatial Data Infrastructures.
- Main Aspects of a Spatial Data Infrastructure (SDI).
- Records of addresses or domiciles.
- Addresses and their interrelation with statistics based on administrative records.
- Examples of address records in some countries.
- Global projects.
- IPUMS and WorldPop projects.

Description of the evaluation

This badge has been issued after successfully completing the course “Cartography and Statistical Geography”. The participant has demonstrated sufficient knowledge to pass the course after achieving a minimum score of 70/100 on four knowledge assessments. Each assessment accounts for 25% of the total course grade.

Furthermore, he has completed the mandatory practical activities and discussion forums proposed throughout the course.

Estimated effort

Completing this course took approximately 17 hours.
